SUMMARY OF SKILLS

- Cloud Monitoring Engineer with **hands-on** experience monitoring and investigating production cloud infrastructure across **AW**S and **Kubernetes** environments. Skilled in **alert triage**, **metrics** and **log analysis**, **incident escalation**, and operational documentation using **Grafana**, **CloudWatch**, Sumo Logic, Lens, and **Pagerduty**.
- Strong foundation in **software development**, **databases**, and **secure system design**, combined with experience working in **structured, fast-paced corporate production environments**.
- **Adaptable**, **detail-oriented**, and seeking an **entry-level role** in a **technology-driven** or **corporate setting**.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python, PHP, JavaScript, C, SQL, Bash, Elixir, Rust, Haskell, C#
- **Web & Frameworks**: ASP.NET Core, React, Node.js, Socket.IO, HTML, CSS, AngularJS
- **Databases:** SQL Server, MySQL
- **Systems & Tools:** Git, GitHub, IIS, Windows Server, Linux, Grafana, Sumologic, Kubernetes, Lens, AWS Cloudwatch, Salesforce, PowerAutomate, Querious
- **Concepts:** MVC Architecture, Single Page Architecture, REST APIs, Authentication & Authorization, Logging, Rate Limiting, Real-Time Systems, Operational Processes, Defensive Programming, Event-driven programming
- **Collaboration & Workflow:** GitHub Issues & Projects, Agile-style task tracking, Team-based development, Code collaboration & reviews, alert triage, incident investigation and report, escalation and handoff

WORK EXPERIENCE

Cloud Monitoring Engineer– Flexera

Remote, Canada | Feb 2026 - Present

- Monitor cloud service health and capacity through Grafana dashboards and **AWS CloudWatch metrics** for **EC2**, **load balancers**, **target groups**, and Aurora databases.
- Investigate alerts by **correlating metrics**, **Sumo Logic logs**, Kubernetes pod health, container restarts, and service events in Lens.
- Assess pod failures and resource signals, including **OOMKilled** events and **liveness** or **readiness probe failures**, and gather relevant logs and timeline details.
- Correlate incident timing with **Jenkins releases** and coordinate **evidence-based escalations** to **SRE** and development teams through established **on-call workflows**.
- Track operational incidents in **Salesforce** and **Pagerduty**, communicate investigation findings during **handoffs**, and document alert context and response steps in Confluence.

Sales Associate– UNIQLO

Square One, Mississauga, Canada | Sep 2025 – Feb 2026

- Operate POS and payment systems accurately in a high-volume retail environment while providing **responsive customer service**.
- Use RFID inventory systems and back-of-house processes to track stock, replenish merchandise, and maintain **organized inventory records**.
- Coordinate with teammates and **store leadership** during daily operations and follow established procedures consistently

PROJECT & INITIATIVES

Salesforce Ticket Monitor — Internal NOC tool
2026 | Internal Project for Flexera NOC team

- Developed and iterated a Manifest V3 browser extension for Chrome and Edge that polls a selected **Salesforce case queue** and detects new tickets without **routine page refreshes**.
- Implemented a local ticket-ID baseline with **deduplication**, **priority-aware** desktop notifications, a **live queue-count badge**, configurable polling, and diagnostics.
- Added optional **Power Automate webhook** integration for summarized Microsoft Teams notifications.
- **Improved NOC efficiency** by reducing manual Salesforce queue checks and notifying employees when new tickets arrive, with **priority-aware alerts** for critical and low-priority cases.
- Surfaced **sudden ticket-volume spikes** so the team could investigate sooner during **potential outages** or **customer-impact event**s.

Spell Duel — Multiplayer Educational Spelling Game Website for PANDA HACKS 2025 (SUMMER 2025)
GitHub:(https://github.com/verdentta/spell-duel)

- Designed and developed a **real-time multiplayer spelling game** aimed at students and early language learners, focusing on engagement, accessibility, and fairness.
- Built the frontend using **React (JavaScript), Node.js, and Socket.IO** with clean component structure, state management, and dynamic **UI updates**.
- Implemented **defensive programming logic** to handle edge cases such as disconnects, late joins, and time-outs to maintain game stability.
- Organized the project with a **clear client–server architecture**, demonstrating understanding of real-time systems, **event-driven programming**, and **user experience design**.
- Focused on educational value, performance, and clean UI behavior, making the project **suitable for classroom or group learning environments**.

Full-Stack Content Sharing Website (Winter 2025) (Winter 2025 - Present)
GitHub:(https://github.com/verdentta/Content-Sharing-Website-Full-stack-)

- Designed and built a full-stack web platform allowing users to **create accounts**, **upload content**, and **interact** through **likes**, **comments**, and **sharing**.
- Implemented **MVC architecture** using **ASP.NET Core** with C#, **SQL Server**, and a responsive frontend.
- Added secure **authentication** and **authorization** using **ASP.NET Core Identity**, including role-based access and **data sanitization.**
- Implemented structured **error handling**, logging (Serilog), and **rate limiting** to improve **reliability, diagnostics**, and **protection** against abuse.
- Deployed the application to a **Windows Server VPS** using **IIS**, gaining **hands-on experience** with **production hosting** and **server configuration**.

EDUCATION

Toronto Metropolitan University
Bachelor of Science (Honors) Computer Science (Graduated Fall 2024) *Toronto, ON*

- Relevant Areas: Software Development, Databases, Web Systems, Algorithms, Operating Systems

Certifications

- **AWS Certified Cloud Practitioner (Amazon Web Services):** Cloud Computing, AWS Cloud, Amazon Web Services
